EDUCATION

Cuban Center for Neurosciences – *Master in Neuro-Physics and Neuro-Engineering*

2010 – 2016

Thesis Bioinformatics Platform (Distributed DICOM/Nifti Storage System / MRI Public Service)

University for Information Sciences – *Bachelor in Information Sciences, Bioinformatics*

2004 – 2009

Thesis Cuban Human Brain Mapping Project: Data Sources Migration Tool

LANGUAGES

Spanish — Native | English — CEFR B1 | French — DELF A2, B1 | German — A1

About Me

Software Technical Lead with 15+ years building and scaling backend systems for FinTech, Payments, and Banking-as-a-Service platforms across LATAM, EMEA, and APAC. Currently leading backend architecture at Eron International for PandaBlue, a global payments wallet live across 9 countries plus Canada and processing ~500K transactions/month. Deep expertise in Java/Kotlin and Spring Boot microservices on AWS and Kubernetes, with a track record of leading engineering teams through KYC, biometric authentication, and multi-country payment integrations at companies like Eron International, MercadoLibre, Technisys, and Verifone. Comfortable owning systems end-to-end — architecture, delivery, and production reliability — while mentoring engineers and driving Agile delivery (Scrum/Kanban). Background in Neuro-Engineering and Bioinformatics brings a strong foundation in data-intensive, distributed systems design.

EXPERIENCE (+15 Years)

Eron International S.A, Montevideo (FinTech/Payments Industry) — *Software Technical Lead* 2024 – current

- Lead a team of 5 backend developers building PandaBlue, a global payments wallet for content creators, designed and implemented from scratch, live across 9 countries (Colombia, Mexico, Brazil, Peru, Argentina, Malaysia, India, Nigeria, Cabo Verde) plus Canada, processing ~500K transactions/month.
- Built Authus, a KYC/KYB solution integrating national identity bureaus across 7 countries (Argentina, India, Colombia, Peru, Chile, Mexico, Brazil) to verify merchants and payers; improved KYC approval/rejection accuracy and payment conversion rates.
- Delivered regulated payment processing for ArgyBlue (Argentina gambling market: BIND, Mercado Pago QR, Prisma, Quikipay) and Brazil (Pix, including automatic Pix/enrollments; integrations with Banco do Brasil, Zappy, Firebank), improving conversion rate and sustaining 98%+ uptime across Colombia, Peru, and Chile.
- Built open-banking web crawlers in Chile for automated bank-transfer processing, and integrated Colombia's Bre-B real-time payment rail, with Monobank and Credibanco.
- Integrated 20+ local payment methods and processors across LATAM and Canada, including card acquiring (Kushki, MercadoPago, Prisma, Monnet, Cielo/Lyra, Transbank/Webpay, Payway, Payphone), real-time/instant payments (Pix and automatic Pix in Brazil, Bre-B in Colombia), bank-transfer rails (SPEI, PSE, Khipu, PagoEfectivo), wallets/QR (CoDi, Nequi, Daviplata, Yape), and cash/OTC (OXXO Pay, Efecty), plus Payana/Mids (Canada) and Xisfo (Colombia).

(Spring/Boot 3.x, Java 17 & 21, AWS, ArgoCD, Kubernetes, Docker, ReactJs, Typescript, Redis, JPA, Hibernate, MySQL, Metamap, Ddit, Spring AI, n8n, Make, Claude, Gemini, Devin, CodeRabbit, Grafana, Prometheus, New Relic, Github, Playwright, Mockito, AssertJ, JUnit / Jupiter, RestAssured, WireMock, Jira, Scrum, Kanban)

MercadoLibre S.A, Montevideo (User Accounts, FinTech/Payments Industry) — Software Technical Lead 2022 – 2024

- Led a team of 5 developers on User Accounts, Biometrics, and Face Recognition, processing 1M+ KYC verifications daily with 98%+ completion rate and under 1% rejection rate.
- Built liveness detection and face-match verification systems sitting on the critical path of MercadoLibre/MercadoPago's retail, payments, publications, and user-onboarding flows.

(Spring/Boot 2.x, Kotlin 1.x / 2.x, Java 17, AWS, Fury PaaS, Facetec SDK, JetBrains Exposed ORM, MySQL, Docker, Datadog, New Relic, Grafana, Prometheus, Kibana, Elasticsearch, Mockk, Mockito, AssertJ, OpenAPI, AsyncAPI, Jira, GitHub, Scrum, Kanban)

Technisys S.A, Montevideo (Banking as a Service) — Software Technical Lead 2022

- Led a team of 5 developers on a cloud-based, white-label Digital & Core Banking Platform (Banking-as-a-Service), serving regional banks including Itaú, Banorte, Davivienda, and Scotiabank.
- Delivered a customizable core banking tool covering payroll processing and money in/out flows, adaptable to diverse banking flows, reducing implementation costs for client banks.

(Spring/Boot 2.x, Java 11, Microsoft Azure / CI, J2EE, EJB3, Jersey, JAX-RS, Apache Kafka, JPA, Hibernate, PostgreSQL, Kubernetes, OWASP, Helm, Docker, JMeter, Mockito, AssertJ, JUnit / Jupiter, Maven, Sonar, Snyk, Trivy, Jira, BitBucket, Confluence, Scrum)

Samqua S.A, Montevideo (Gambling, Casino, e-Commerce) — Senior Software Engineer 2021 – 2022

- Developed and maintained Firefly, a real-money gaming and e-commerce platform backend, using Java/Spring Boot microservices with a Drools-based business rule engine for bet/transaction logic and Bitcoin payment integration.
- Automated build, test, and deployment pipelines with Gitlab CI, Ansible, and Chef, and drove test coverage across the platform using JUnit, Mockito, and WireMock on CentOS infrastructure.

(Spring/Boot 2.x, Java 8 & 11, J2EE, EJB, Bitcoin, Drools, PostgreSQL, Ansible, Chef, Gitlab / Gitlab CI, Mockito, AssertJ, JUnit / Jupiter, SpringTests, WireMock, Docker, CentOS, Maven, Jira, Confluence)

Verifone S.A, Montevideo (FinTech/Payments Industry) — Senior Software Design Engineer / Edge Guild Lead, Senior Research Engineer 2020 – 2021

- Served as Edge Guild Lead, setting technical standards for distributed edge and gateway services within Greenbox, an advanced payment gateway platform built on Java/Spring Boot with Netty and RabbitMQ for high-throughput transaction messaging.
- Led performance and reliability engineering for the payment gateway using Hazelcast/Redis caching, JMeter/BlazeMeter load testing, and OWASP-aligned security hardening across edge services.

(Spring / Boot 2.x, Java 8, Angular, AngularJS, J2EE, EJB, Netty, Rabbit MQ, Hazelcast, Redis, ELK/Beats, Ansible, Wildfly / Thorntail, TestContainers, BlazeMeter, JMeter, Mockito, AssertJ, JUnit / Jupiter, TestNG, Docker, Oracle, RHEL, OWASP, Maven, Jenkins CI, Atlassian Suite, Scrum)

US General Software Inc, Havana (Oil, Commodities & Transportation / Cyber-Security / Data Pipeline) — Software Technical Lead, Data Engineer, Senior Full-Stack Software Engineer 2018 – 2019

- Led Fleet I/O, an IoT/Big Data analytics pipeline for transportation fleet telemetry, ingesting MQTT sensor data from Raspberry Pi edge devices through Kafka/NiFi into Hadoop/Spark for fleet performance analytics.
- Built Threat Compass for Blueliv, a cyber-threat intelligence analysis suite processing large-scale threat data feeds using Elasticsearch/ELK and Apache Lucene-based search.
- Delivered Welltrax for Vertrax, a fleet management system integrating real-time vehicle tracking with a Java/Spring Boot backend and JDBC/SQL Server data layer.

(Spring/Boot 1.x & 2.x, Java 8 / 11, Python, Jython, ActionScript/Adobe Flex, Netflix OSS, J2EE, Jersey REST, JAX-RS, JDBC, Quartz, MQTT/Mosquitto, AWS, Apache Software Foundation (Hadoop, Nifi, Kafka, Pulsar, Spark, OpenZipkin, Lucene, Tika), ELK, MySQL, SQL Server, Raspberry Pi, Docker, Maven, Drone CI, Jenkins CI, Gitlab/GitHub, JUnit, Cucumber, Selenium, Rest Assured, Jira, Zoho, Scrum)

Apollo Systems .Gmbh (TISSCA), Havana (Low-Code, BPEL Suite) — Senior Full-Stack Software Engineer 2017 – 2018

- Built core modules of the Apollo Digital Innovation Platform, a low-code BPMN workflow builder, using GWT and Java on top of the Camunda BPM engine, enabling business users to design and deploy automated processes without custom code.

(GWT, Java 8, J2EE, JavaScript, BPMN, Camunda Engine, Mockito, Maven, PostgreSQL, YouTrack, Gitlab)

Carricay Group, Havana (Leisure/Tourism/Hospital Information Systems) — Senior Full-Stack Software Engineer, Business Architect 2016 – 2017

- Designed and built the Pharmacy Module of a Hospital Information System (HIS), covering medication inventory and prescription workflows, with REST API integration into other hospital modules, using ASP.NET MVC and SQL Server.
- Acted as Business Architect and full-stack engineer for TourPourTous, a travel and hosting booking platform, building the backend in Symfony/Doctrine ORM with a KnockoutJS/Angular frontend and OAuth 2 authentication.

(ASP.NET MVC, PHP, KnockoutJS, Angular, Symfony, Doctrine ORM, REST API, OAuth 2, Bootstrap, JQuery, SQL Server, MySQL, Reports, Gitlab)

Cuban Center for Neurosciences, Havana (Neurosciences/Telematics/Enterprise Systems) — Head of Telematics, Software Technical Lead, Business/Information Architect, Senior Full-Stack Software Engineer 2009 – 2017

- Served as Head of Telematics, leading network administration, connectivity services, and enterprise IT support across the center's research and clinical facilities.
- Led business process automation initiatives, architecting internal enterprise systems (ASP.NET MVC/Symfony) to digitize administrative and research workflows.
- Acted as Business/Information Architect, shaping the information systems strategy behind the center's telematics and enterprise software portfolio across an 8-year tenure spanning multiple technical leadership roles.

(ASP.NET MVC, PHP, KnockoutJS, Angular, Symfony, Entity Framework, Doctrine ORM, REST API, OAuth 2, Bootstrap, JQuery, SQL Server, MySQL, Reports, Gitlab)
